60-6

Dear Sir:

I am a former member of the House Armed Services Committee and presently with the World Computer Graphics Association, a non-profit organization that organizes a computer graphics conference each year in Washington known as Defense and Government Computer Graphics.

We believe that the most effective conference program is one that has various departments and agencies of the fedreal government present sessions focusing on the use of computer graphics within their respective departments/agencies. While we do not have detailed information as to the various uses of comptuer graphics within the federal government, we do know that the government makes extensive use of computer technology, particularly in the military, NASA, the budgeting process, and in various situation rooms and program controls.

The composition of the DGC Advisory Board illustrates the high level of esteem and confidence placed in this conference by the military and public and private figures of the defense community.

We would appreciate having someone from the CIA discuss the use of computer graphics by the CIA, to the extent that you can do so without disclosing confidential applications and data.

I have enclosed information, as background material, about this year's conference. As for the subject matter of CIA's presentation, it is our feeling that you would be the best judge of what the CIA is doing in the area of computer graphics and what might be of interest to other government employees.

Pleaes advise me, at your earliest convenience, as to CIA's participation. The program dates are indicated above.

Sincerely,

Andrew Hinshaw
Conference Director
